THINKCYBER senator-conseil.swiss
				<b>3 days online</b> 22 <sup>th</sup> & 29 <sup>th</sup> Oct. 5 <sup>th</sup> Nov.

# OUR LEARNING MANAGEMENT APPROACH

Sémafor Conseil's learning management is participant centric. The enrollment of the practitioner is carefully planned and articulated in order to provide him with the best possible learning experience.

Once entered into the **participant management process (personalized coaching)**, the practitioner will be invited to come and get involved in the chosen training, in our **Cyberium Arena (LMS)**. The later is a virtual learning and training zone, disconnected from any system, which will allow the practitioner to **learn, test, train**, all the tips and tricks related to his profession. Without danger, the practitioner will spend **80 to 90% of his training time** in this Cyberium. Whether it is for the simulations or for the labs, the examples taken by the facilitator are the most recent and always as close to reality as possible.

Of course, all this practice will be supported by the most robust theories (20% of the remaining time).

As our trainings are delivered in "**sequential mode**" (one day per week over 5 weeks), thus enabling the participants to have time to harness the content of the courses in a much deeper fashion than with a block approach, as well as giving the opportunity to build a meaningful project

In addition, in order to provide maximum flexibility and comfort and to let the participant focus 100% on his training, it can be followed from the **place of his choice (home, office, nomad)**, in agreement with his employer.

## Benefits for:

### Human Ressources

For Human Resources Managers, we create efficient training paths, which are palatable and enabling participants to keep their agendas available 4 days a week for the duration of the course, thus providing an immediate return on investment throughout the course, from the first training day, as the practitioners can incorporate its learning into its daily practice .

### IT & Cybersecurity Management

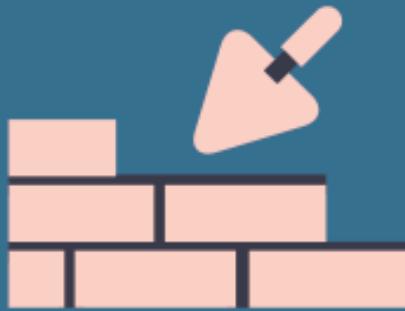

For managers, we offer training module that provides the most current topical knowledge in cybersecurity in order for the participants to deliver an immediate return on investment with strong and engageable technical skills, which the practitioners can leverage with confidence on the job.

### Practitioners

For the company's practitioners, we create unique conditions for effective and innovative courses focused on cybersecurity, leveraging the most up-to-date training environment, where participants can explore and discover safely the uses of the tools they are exposed to. The practitioners are supported throughout the courses by a team of expert coaches and trainers, which will empower them to be successful; they can also leverage the acquired knowledge to pass related certifications.

# Expand your cybersecurity knowledge

## foundations

### Cybersecurity Foundations

This track covers the fundamental concepts of cyber defense and practical understanding of basic tools and technics using our LMS, the CYBERIUM ARENA platform.

Participants learn the basics of the various concepts as they get to grips with basic cybersecurity technology products.

The banner is a rectangular image with a dark blue background. On the left is the Sémafor Conseil logo. In the center, the title 'CYBER SECURITY LEARNING' is at the top, followed by 'Cybersecurity Introduction'. Below the title are course details: 'Online Courses CYBERIUM ARENA SIMULATOR', '16 hours', '2 days', '86% hands-on', '2 case studies', and '8 labs'. At the bottom left is the THINKCYBER logo, and at the bottom right is the website 'semafor-conseil.swiss'.

Introduction to Cybersecurity is an essential course covering main topics from the cyber world and allows the participants to quickly view the complex world of digital crimes.

This training covers the core concepts of defense and understanding in the practical world using the CYBERIUM ARENA simulator. Participants will learn about different domain structures and security technology products.

#### This course is essential for:

Any Manager who wants to have basic knowledge in cybersecurity to understand the cyber world and foundation knowledge to make decision/investment to secure companies informations.

Complete syllabus online:  
<https://semafor-conseil.swiss/en/ns101-cybersecurity-introduction/>

# Taking your **knowledge** to the **next level**

The banner is a rectangular image with a dark blue background. On the left is the Sémafor Conseil logo. In the center, the title 'CYBER SECURITY LEARNING' is at the top, followed by 'Cryptography'. Below the title are course details: 'Online Courses CYBERIUM ARENA SIMULATOR', '16 hours', '2 days', '83% hands-on', '2 case studies', and '4 labs'. At the bottom left is the THINKCYBER logo, and at the bottom right is the website 'semafor-conseil.swiss'.

Cryptography is an indispensable tool for protecting information in computer systems. In this course, you will learn the inner workings of cryptographic systems and how to use them in real-world applications correctly.

From ancient examples of secret messages and the spies that cracked them to modern cryptographic applications, you will have the opportunity to explore the foundations of data security.

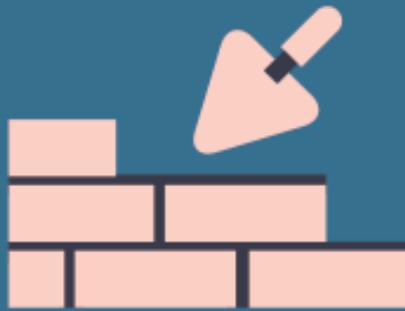

#### This course is essential for:

Cybersecurity beginners  
Anyone interested in cryptography  
Anyone curious about how the data are encrypted to be secured

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt216-cryptography/>

# Expand your cybersecurity knowledge

foundations

CYBER SECURITY LEARNING

## Linux Introduction

Online Courses  
CYBERIUM ARENA SIMULATOR

24 hours | 3 days | 90% hands-on | 3 case studies | 8 labs

THINKCYBER

semafor-conseil.swiss

This training covers basic use in the Linux environment. Linux Introduction course is designed for non-experienced users, helping them become comfortable with Linux and basic automation scripting capabilities.

#### This course is essential for:

- Anyone comfortable with computers who wants to have basic knowledge with Linux System
- Anyone who wants to start a career in cybersecurity
- Any Manager who has to deal with IT & Security teams

Complete syllabus online:  
<https://semafor-conseil.swiss/en/ns103-linux-introduction/>

Taking your **knowledge** to the **next level**

CYBER SECURITY LEARNING

## Python Introduction

Online Courses  
CYBERIUM ARENA SIMULATOR

24 hours | 3 days | 90% hands-on | 3 case studies | 8 labs

THINKCYBER

semafor-conseil.swiss

Any person wanting to automate stages and create cyber-tools must learn to program. Python is an easy language used by many to build tools in different fields, including cyber.

This training will provide the participant with a stepping-stone on understanding programming logic and creating basic scripts to take his skills to the next level.

#### This course is essential for:

- Anyone comfortable with computers who wants to learn the foundation of the most common cybersecurity language
- Softwares and Apps developers

Complete syllabus online:  
<https://semafor-conseil.swiss/en/ns105-python-intro/>

## Network Security

Network security encompasses a wide number of technologies, devices and processes. After these courses, you will be able to discover security vulnerabilities throughout the network using exploration & discovery and vulnerability analysis techniques. You will understand the different types of firewalls available and master hardening for Windows and Linux servers.

## Expand your cybersecurity knowledge

CYBER SECURITY LEARNING

# Network Security

Online Courses CYBERIUM ARENA SIMULATOR

40 hours 5 days 92% hands-on 5 case studies 13 labs

THINKCYBER semafor-conseil.swiss

Network security is a broad term that covers multiple technologies, devices, and processes. Nowadays, every organization, regardless of size, industry, or infrastructure, requires a network security expert in place to protect it from the ever-growing landscape of cyber threats today.

After this course, you will discover security vulnerabilities across the entire network using network hacking techniques and vulnerability scanning. You will understand the various types of firewalls available and master both Windows and Linux servers' hardening.

### This course is essential for:

Computer or network specialists who want to turn their knowledge into security perspectives

Network operatives

Programmers & Developers

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt208-network-security/>

## Taking your knowledge to the next level

CYBER SECURITY LEARNING

# Penetration Testing

Online Courses CYBERIUM ARENA SIMULATOR

40 hours 5 days 90% hands-on 5 case studies 10 labs

THINKCYBER semafor-conseil.swiss

Penetration testers face a combination of intrusion detection systems, host-based protection, hardened systems, and analysts that pour over data collected by their security information management systems.

Penetration tests help find flaws in the system to take appropriate security measures to protect the data and maintain functionality. This training will provide the participant with a stepping stone on running penetration testing in practice and taking on the complex task of effectively targeting and planning a penetration attack on a traditionally secured environment.

### This course is essential for:

This course targets people from the IT world that want to upgrade their careers and master the art of penetration testing.

Network & IT operatives

Incident responders

Pen Testers who want to update or upgrade their skills

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt212-penetration-testing/>

## Open Source INTelligence (OSINT)

Open Source Intelligence (OSINT) covers the techniques and procedures used to retrieve targeted information from freely accessible networks containing vast amounts of data.

## Expand your cybersecurity knowledge

The banner features the Sémafor CONSEIL logo at the top left. To its right is a background image of a city map. In the center, the text "CYBER SECURITY LEARNING" is displayed above "Open Source Intelligence". Below that is the large word "OSINT". At the bottom left is the "THINKCYBER" logo. To the right of the main title are several statistics in colored boxes: "Online Courses CYBERUM ARENA SIMULATOR" (40 hours), "5 days", "88% hands-on", "5 case studies", and "8 labs". The bottom right corner shows the website "semafor-conseil.swiss".

Network security is a broad term that covers multiple technologies, devices, and processes. Nowadays, every organization, regardless of size, industry, or infrastructure, requires a network security expert in place to protect it from the ever-growing landscape of cyber threats today.

After this course, you will discover security vulnerabilities across the entire network using network hacking techniques and vulnerability scanning. You will understand the various types of firewalls available and master both Windows and Linux servers' hardening.

### This course is essential for:

- Intelligence officers
- Police officers
- Private/public Investigators
- Forensics investigators
- Reporters/Journalists

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt214-osint/>

## Taking your knowledge to the next level

The banner features the Sémafor CONSEIL logo at the top left. To its right is a background image of a stack of coins. In the center, the text "CYBER SECURITY LEARNING" is displayed above "Open Source Intelligence". Below that is the large word "OSINT Automation". At the bottom left is the "THINKCYBER" logo. To the right of the main title are several statistics in colored boxes: "Online Courses CYBERUM ARENA SIMULATOR" (40 hours), "5 days", "88% hands-on", "5 case studies", and "8 labs". The bottom right corner shows the website "semafor-conseil.swiss".

Open-source intelligence (OSINT) Automation covers the techniques and procedures practiced retrieving targeted information from open-source networks containing immense amounts of data using automatic tools to achieve maximum results.

This course teaches participants how to collect and analyze information using different tools and creating automation. Participants will be further exposed to collecting information from the Darknet, social networks, and other sources.

### This course is essential for:

This course targets mostly law-enforcement wanting to master the art of finding data around the internet.

- Threat intelligence analysts
- Cybersecurity professionals
- Law enforcement personnel
- Private/public Investigators
- Forensics investigators

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt221-osint-automation/>

# threat management

## Threat Management

At the core of any cybersecurity implementation there is threat management, by setting up the structures, such as a SOC enabling the organisation to face threats, and by giving the means to hunt them efficiently to reduce the risks and improve the organisation's overall posture.

## Expand your cybersecurity knowledge

A banner for the "SOC Analyst" course. It features the Semafor Conseil logo at the top left, followed by the text "CYBER SECURITY LEARNING" and "SOC Analyst". Below this is a row of five colored boxes containing course details: "Online Courses CYBERIUM ARENA SIMULATOR", "40 hours", "5 days", "90% hands-on", "5 case studies", and "11 labs". At the bottom left is the THINKCYBER logo, and at the bottom right is the website "semafor-conseil.swiss".

CYBER SECURITY LEARNING  
SOC Analyst

Online Courses CYBERIUM ARENA SIMULATOR

40 hours 5 days 90% hands-on 5 case studies 11 labs

THINKCYBER semafor-conseil.swiss

Nowadays, a Security Operation Centers (SOC) should have everything it needs to mount a competent defense of the constantly changing IT enterprise. The SOC includes a vast array of sophisticated detection and prevention technologies, cyber intelligence reporting, and access to a rapidly expanding workforce of talented IT professionals.

This SOC Operation course is designed for SOC organizations to implement a SOC solution and provide full guidance on the necessary skills and procedures to operate it. The training will provide participants with all aspects of a SOC team to keep the enterprise's adversary.

### This course is essential for:

Computer specialists to begin or evolve in cybersecurity with network foundation knowledge  
People implicated in internal security policy

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt222-soc-analyst/>

## Taking your **knowledge** to the **next level**

A banner for the "Threat Hunting" course. It features the Semafor Conseil logo at the top left, followed by the text "CYBER SECURITY LEARNING" and "Threat Hunting". Below this is a row of five colored boxes containing course details: "Online Courses CYBERIUM ARENA SIMULATOR", "40 hours", "5 days", "90% hands-on", "5 case studies", and "11 labs". At the bottom left is the THINKCYBER logo, and at the bottom right is the website "semafor-conseil.swiss".

CYBER SECURITY LEARNING  
Threat Hunting

Online Courses CYBERIUM ARENA SIMULATOR

40 hours 5 days 90% hands-on 5 case studies 11 labs

THINKCYBER semafor-conseil.swiss

In today's cybersecurity landscape, it isn't possible to prevent every attack. Threat hunting is the proactive technique that focuses on pursuing attacks and the evidence that attackers leave behind when they patrol an attack using malware or expose sensitive data.

The process is important and is based on thinking that the attacker has already managed to infiltrate and test everything possible to detect intrusion earlier to stop them before intruders can carry out their attacks and exploit them illegally.

### This course is essential for:

Specialists and operatives with networking knowledge who want to acquire the threat hunting capabilities to protect their organization better.

Network administrators/specialists  
Security Testers  
Cybersecurity consultants  
Ethical Hackers

Complete syllabus online:  
<https://semafor-conseil.swiss/en/bt223-threat-hunting/>

# Expand your cybersecurity knowledge

## Web Applications Security

Applied web security is specifically about the security of websites, web applications (WebApp). At a higher level, Web security covers the principles of cybersecurity applied to the Internet and Web systems.

The Web Application Security course will help participants understand web application languages and their exploitation. Participants will learn a proven process for locating these flaws consistently.

This training program's primary goal is to help security specialists understand web application risks in their organization and learn how to conduct web application security assessments.

### This course is essential for:

- Webmasters
- Web Apps/Services Designers
- PHP Developers
- Intranet/Internet Developers

Complete syllabus online:  
<https://semafor-conseil.swiss/en/rt422-web-application-security-intermediate/>

# Taking your knowledge to the next level

During this training, participants will get knowledge and skills of the pentesters procedure to detect security vulnerabilities in web applications using a combination of manual and automated techniques and methods.

Testing web-application security is not intuitive, and to be useful, you need an understanding of web application design, HTTP, JavaScript, browser behavior, and potentially other technologies.

### This course is essential for:

- Internet/intranet developers to secure datas
- Penetration Testers
- Cybersecurity consultants
- Security architects
- Red team specialists
- Ethical hackers

Complete syllabus online:  
<https://semafor-conseil.swiss/en/rt423-webapp-security-advanced/>

# TRAINING

# PROGRAM

Our current practitioner training courses offering covers 5 key areas of cybersecurity, Network Security, Web Application Security, Threat Management and OSINT, as well as Fundamentals in Cybersecurity, Cryptography, Linux system engineering and also an introduction to Python.

Sémafor Conseil has a much broader catalog encompassing 30 courses, which go well beyond the above knowledge areas, covering forensics, exploit development, and as well industrial control systems.
